Are metal roofs affordable?

While the up-front investment is higher than an asphalt roof, homeowners can recoup 60% – 90% of the initial cost

Do metal roofs make houses hotter?

Metal roofs often have a high reflectivity, which means they bounce a significant portion of the sun's heat away from the house. This helps to reduce the amount of heat absorbed by the roof and, consequently, can help keep the interior of the house cooler.

Do metal roofs attract lightning?

The rate of lightning strikes on homes with metal roofing is no more likely than asphalt shingles. Since metal roofs are fire resistant, they are much less likely to cause damage to a home in the event of a lightning strike.

Are metal roofs more noisy?

While bare metal roofs are louder, our stone coated tiles help dampen the effects of rain and hail.
